

## FAST FACTS

### 53% Copper Wireline Coverage

The map illustrates the areas covered by broadband over other copper wireline within Rhode Island. According to data provided to Broadband RI by two identified Broadband Providers servicing business and residential customers; 53% of the census blocks within Rhode Island have broadband technology available to them via other copper wireline (non-DSL).

Typical connections allow users to receive data in excess of 3 Mbps and send data at speeds in excess of 3 Mbps, though actual speed is determined by the proximity to the providers central office.

## Rhode Island Broadband Other Copper Wireline Coverage

This map features Broadband Rhode Island data effective December 31, 2013. Basemap courtesy of Esri. This map is not a survey. This is an NTIA project.
